## LASER HAIR REMOVAL & IPL TREATMENTS NOW'S THE TIME

Anytime's a great time to start Laser Hair Removal and IPL Photo Rejuvenation treatments. However, the winter months are optimal to start your series because sun exposure must be avoided 4-6 weeks before and after treatment.

### Laser Hair Removal

Traditional hair removal techniques such as shaving, plucking and waxing are not only time consuming, tedious and uncomfortable; they are only temporary. Laser Hair Removal is an excellent way to cut down on your maintenance routine and is an effective way of getting rid of unwanted body hair for good!

### IPL Photo Rejuvenation

Photo Rejuvenation refreshes the entire face and provides noticeable, but subtle results achieved over several treatment sessions. This gradual approach allows you to return quickly to work or routine activities without a recovery period. From rosacea, fine lines, age spots and broken capillaries to enlarged pores, coarse skin and mottled pigmentation, IPL Photo Rejuvenation eliminates the signs of aging while restoring a youthful smoothness with high satisfaction.

## START YOUR PEEL SERIES NOW AND RECEIVE 10% OFF!

Our peels help clear acne, fade hyperpigmentation and restore the bright clear skin you've always wanted. Our clients also report that after the peel, their skin feels silky and makeup application is more flawless. Typically clients begin to see results after 3-4 sessions. For the month of December, purchase a series of four Peels and receive 10% off.

This is a limited time offer that expires December 31, 2009.

## TURN BACK THE HANDS OF TIME HAND PHOTO REJUVENATION TREATMENTS

Special limited time offer \$500 for package of 3 treatments (you save \$265)

The biggest age give away next to your face is definitely your hands. They are also the #1 over looked body part in anti-aging esthetics. Most women are aware of the risks of sun damage and use a daily sunscreen on their face and maybe even their neck and décolleté, but very few actually apply sunscreen to their hands. Hands are one of the first parts of the body to show signs of aging because they receive so much exposure. Sunlight, the elements and the natural aging process all contribute to the development of darkened spots and precancerous growths.

The good news is that this is all easily treatable. Hand Photo Rejuvenation uses Intense Pulsed Light (IPL) to target and reduce/eliminate red and brown pigmentation on aging hands. The light passes harmlessly through the skin and is absorbed by spots and lesions. Abnormal cells are destroyed, leaving only healthy tissue. IPL also promotes the growth of collagen, fills in scars and gives skin a youthful glow. So Turn Back the Hands of Time and start your Hand Photo Rejuvenation treatments today!

Special offer is only available until December 31, 2009.
